

~~The Worm~~ Tow - Remains of the worm Tow to Super Worm occurred in the Summer of 1987. A new lower terminal was built ~~upper~~ 80' ~~the~~ further down the hill. Upper terminal remained in same location. Mechanism remains well: speed increased to 800/min (9.1 MPH), upper terminal new rope track added, lower terminal complete new design. Many of parts for this Tow donated by Crystal Mountain Tree (Crystal's Tows were originally modeled after the Meany <sup>Mach</sup> Tow which was designed by Walt Hill) Snail Tow - New Tow built in Summer of 1986-87 located SE of Mach Tow. The driving <sup>transferred in fact</sup> machinery originally operated the worm Tow. This area was built to provide a new, safe beginner Tow area. This Tow also has been called "The Slug" to keep in tune w/ the ~~slow~~ slow ferocious animals of the Meany Woods.
